

Quality Assurance Engineer – Manila based

You have a keen eye that quickly spots issues, and you are able to turn them into opportunities to improve your team's quality and efficiency? You have a solid understanding of development workflows, frameworks and methodologies and love solving big picture problems without losing patience?

At mClinica we value talented professionals with a global mindset that take initiative and drive change. In turn we reward them with significant responsibility and the ability to directly impact our business. We are now looking for an experienced and highly motivated **Quality Assurance Engineer**, who can bring our multi country digital platforms to the next level and change the health outcomes of hundreds of millions of patients across Southeast Asia.

Your role:

- Assist with defining use and test cases during product ideation stage.
- Design, build, and maintain a test automation suite using Robot Framework.
- Creating an end-to-end test plan; executing the plan and managing all activities in the plan to ensure that all the objectives are met and that the solution works as expected.
- Ensuring that the build is tested in terms of functionality, performance, reliability, stability and compatibility with other legacy versions.
- Reporting of test results and follow up on issue fixes.
- Estimating story points with the product and development teams during sprint refinement meetings.
- Suggest user experience improvements based on testing experience.
- Execute scripts during regression test cycles in accordance with the agreed scope and schedule.
- Identify potential opportunities of saving manual testing efforts by leveraging test automation.

Qualifications (required):

- Exceptional problem solving and analytical skills.
- Self-starter mentality with a 'can-do' attitude that flourishes in a challenging and rapidly evolving environment.
- Comfortable working with agile methodology. We sometimes change the requirements in the middle of a sprint, the successful applicant must have the ability to shift from one task to another without being disoriented.
- First-hand experience with test management tools (e.g. Jira and VSTS).
- Extensive knowledge of testing mobile applications both in Android and iOS.
- Knowledgeable in Automation testing using Robot Framework.
- Previous experience (2+ years) of working with various automation frameworks (Keyword Driven and Data Driven) and automation tools.

- Previous experience (2+ years) using any test management or defect management tool (HPQC, HPALM, JIRA or VSTS preferred).
- Experience creating test plans and test strategy for either functional testing or automation testing, or both.

Benefits:

- Opportunity to work with bleeding edge technologies (we decide what we use).
- Competitive salary.
- Career growth (we reward performance with direct responsibilities).
- Free flowing coffee, lunch provided.
- Casual working environment as part of a high performing global team.

Start date: As soon as possible.
